

The CROSS series F1 and F2 in-line type hydraulic oil filters are high-quality, low cost units featuring spin-on, throw away elements. The thru-type by-pass valve is available in 5 (F1 only), 15 or 25 psi for return line installations and 5 psi for suction line applications. A specially engineered seal permits usage up to 175 psi for F1 and 100 psi for F2.

GENERAL SPECIFICATIONS:

Rated flow -----	F1: 22 gpm (78 l/m) -----	F2: 40 gpm (227 l/m)
Filtering area -----	F1: 10 micron -----	349 sq. in. (2252 cm ²)
	25 micron -----	490 sq. in. (3161 cm ²)
	F2: 10 micron -----	892 sq. in. (5755 cm ²)
	25 micron -----	1075 sq. in. (6935 cm ²)
Rated pressure -----	F2: 100 PSI (6.9 bar)-----	F1: 175 PSI (12.1 bar)
Temperature range -----	20° F (-29° C) to + 300° F (149° C)	
Mounting -----	In-line and 2 threaded bosses	
Weight -----	F1: 2 lbs. (.9 Kg) -----	F2: 6 lbs. (2.7 Kg)

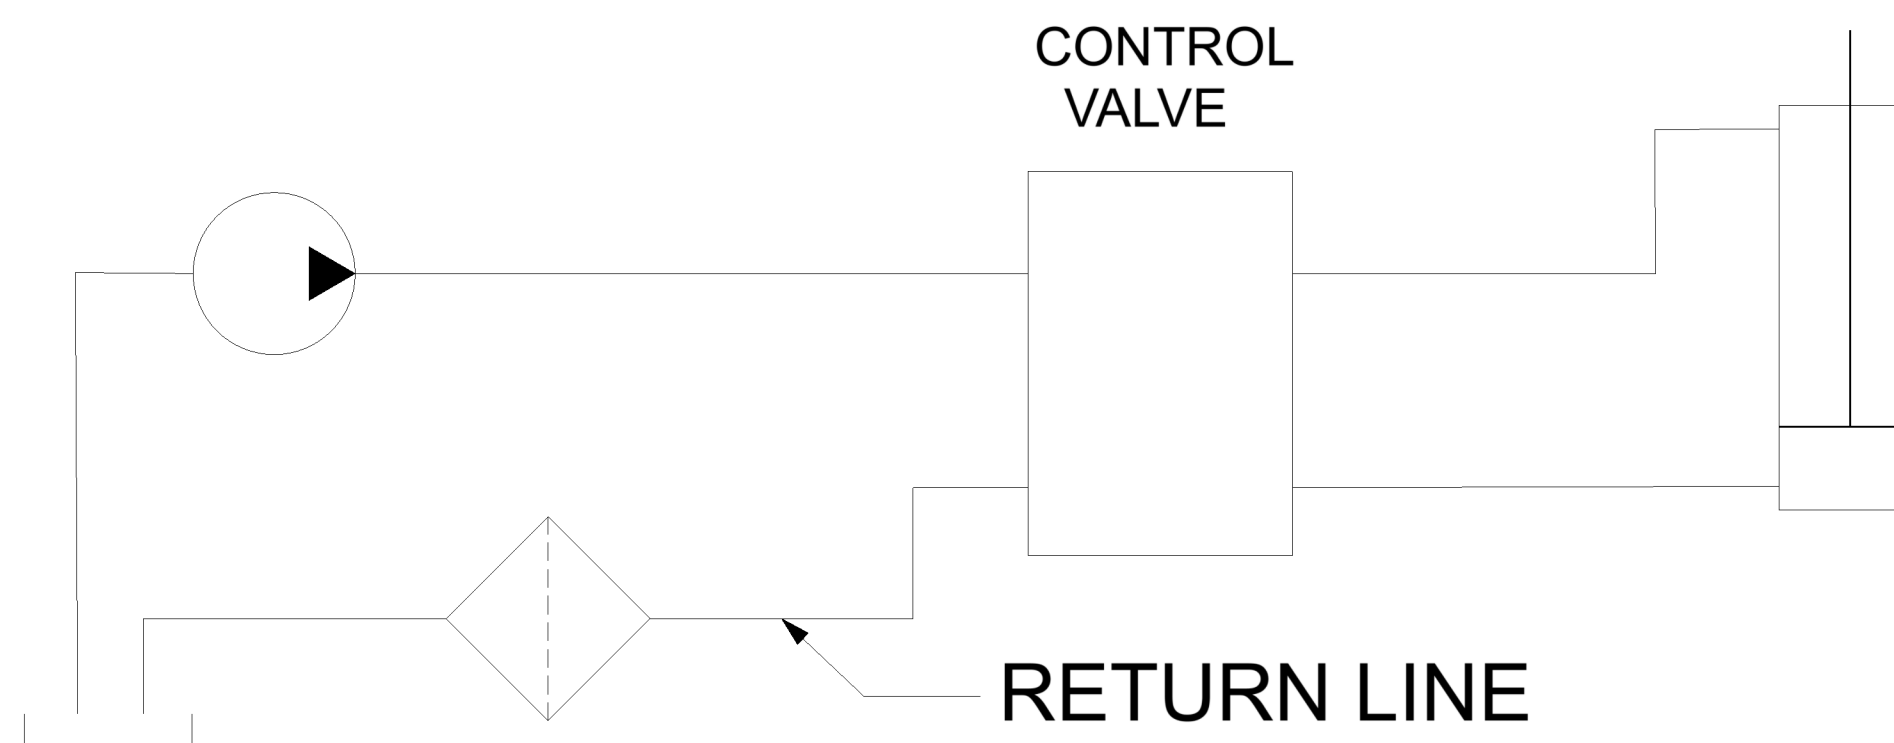

FEATURES:

- Full flow filtration
- Spin-on, throw away elements
- 10 or 25 micron filter elements
- Heads include 5 (F1 only) ,15 and 25 psi by-pass spring assemblies
- Pipe ports

AVAILABLE OPTIONS:

- Indicator (pressure) gauge

APPLICATIONS (TYPICAL):

Hydraulic system preventive maintenance, with regular filter element changes, is essential to assure long life of the components and to prevent personal injury resulting from equipment malfunction. Spin-on filters should be changed after 50 hours of initial use and then every one hundred hours of use.

If the CROSS filter becomes clogged with contamination before changing, the internal by-pass valve opens at the pre-set pressure to prevent collapse of the element (return line). A filter must be sized to handle the maximum flow at its position in the system: i.e., a return line filter in a regenerative or accumulator system must be capable of handling the full flow being returned to the reservoir which is frequently in excess of the pump output capacity.

Model F1 Parts:

Item	Part Number	Description	Qty.
1	1F0005	Assembly, Filter Head (3/4" NPTF - 5 PSI By-Pass)	Opt.
2	1F0015	Assembly, Filter Head (3/4" NPTF - 15 PSI By-Pass)	1
3	1F0025	Assembly, Filter Head (3/4" NPTF - 25 PSI By-Pass)	Opt.
4	1A1699	Pressure Gage, 0-30 PSI	Opt.
5	2A0349-2	Pipe Plug, 1/8" NPTF	Opt.
6	1A9021	Filter Replacement Cartridge (10 Micron)	1
7	1A9023	Filter Replacement Cartridge (25 Micron)	Opt.
--	1A9272	Replacement Filter Gasket	

Model F2 Parts:

Item	Part Number	Description	Qty.
1	2F0015	Assembly, Filter Head (1 1/4" NPTF - 15 PSI By-Pass)	1
2	2F0025	Assembly, Filter Head (1 1/4" NPTF - 25 PSI By-Pass)	Opt.
3	1A1699	Pressure Gage, 0-30 PSI	Opt.
4	2A0349-2	Pipe Plug, 1/8" NPTF	Opt.
5	1A9251	Filter Replacement Cartridge (10 Micron)	1
6	1A9253	Filter Replacement Cartridge (25 Micron)	Opt.
--	1A9111	Replacement Filter Gasket

DIMENSIONAL DATA: in inches and [millimeters]

ELEMENT THREAD REFERENCE
1-12 UNF-2B

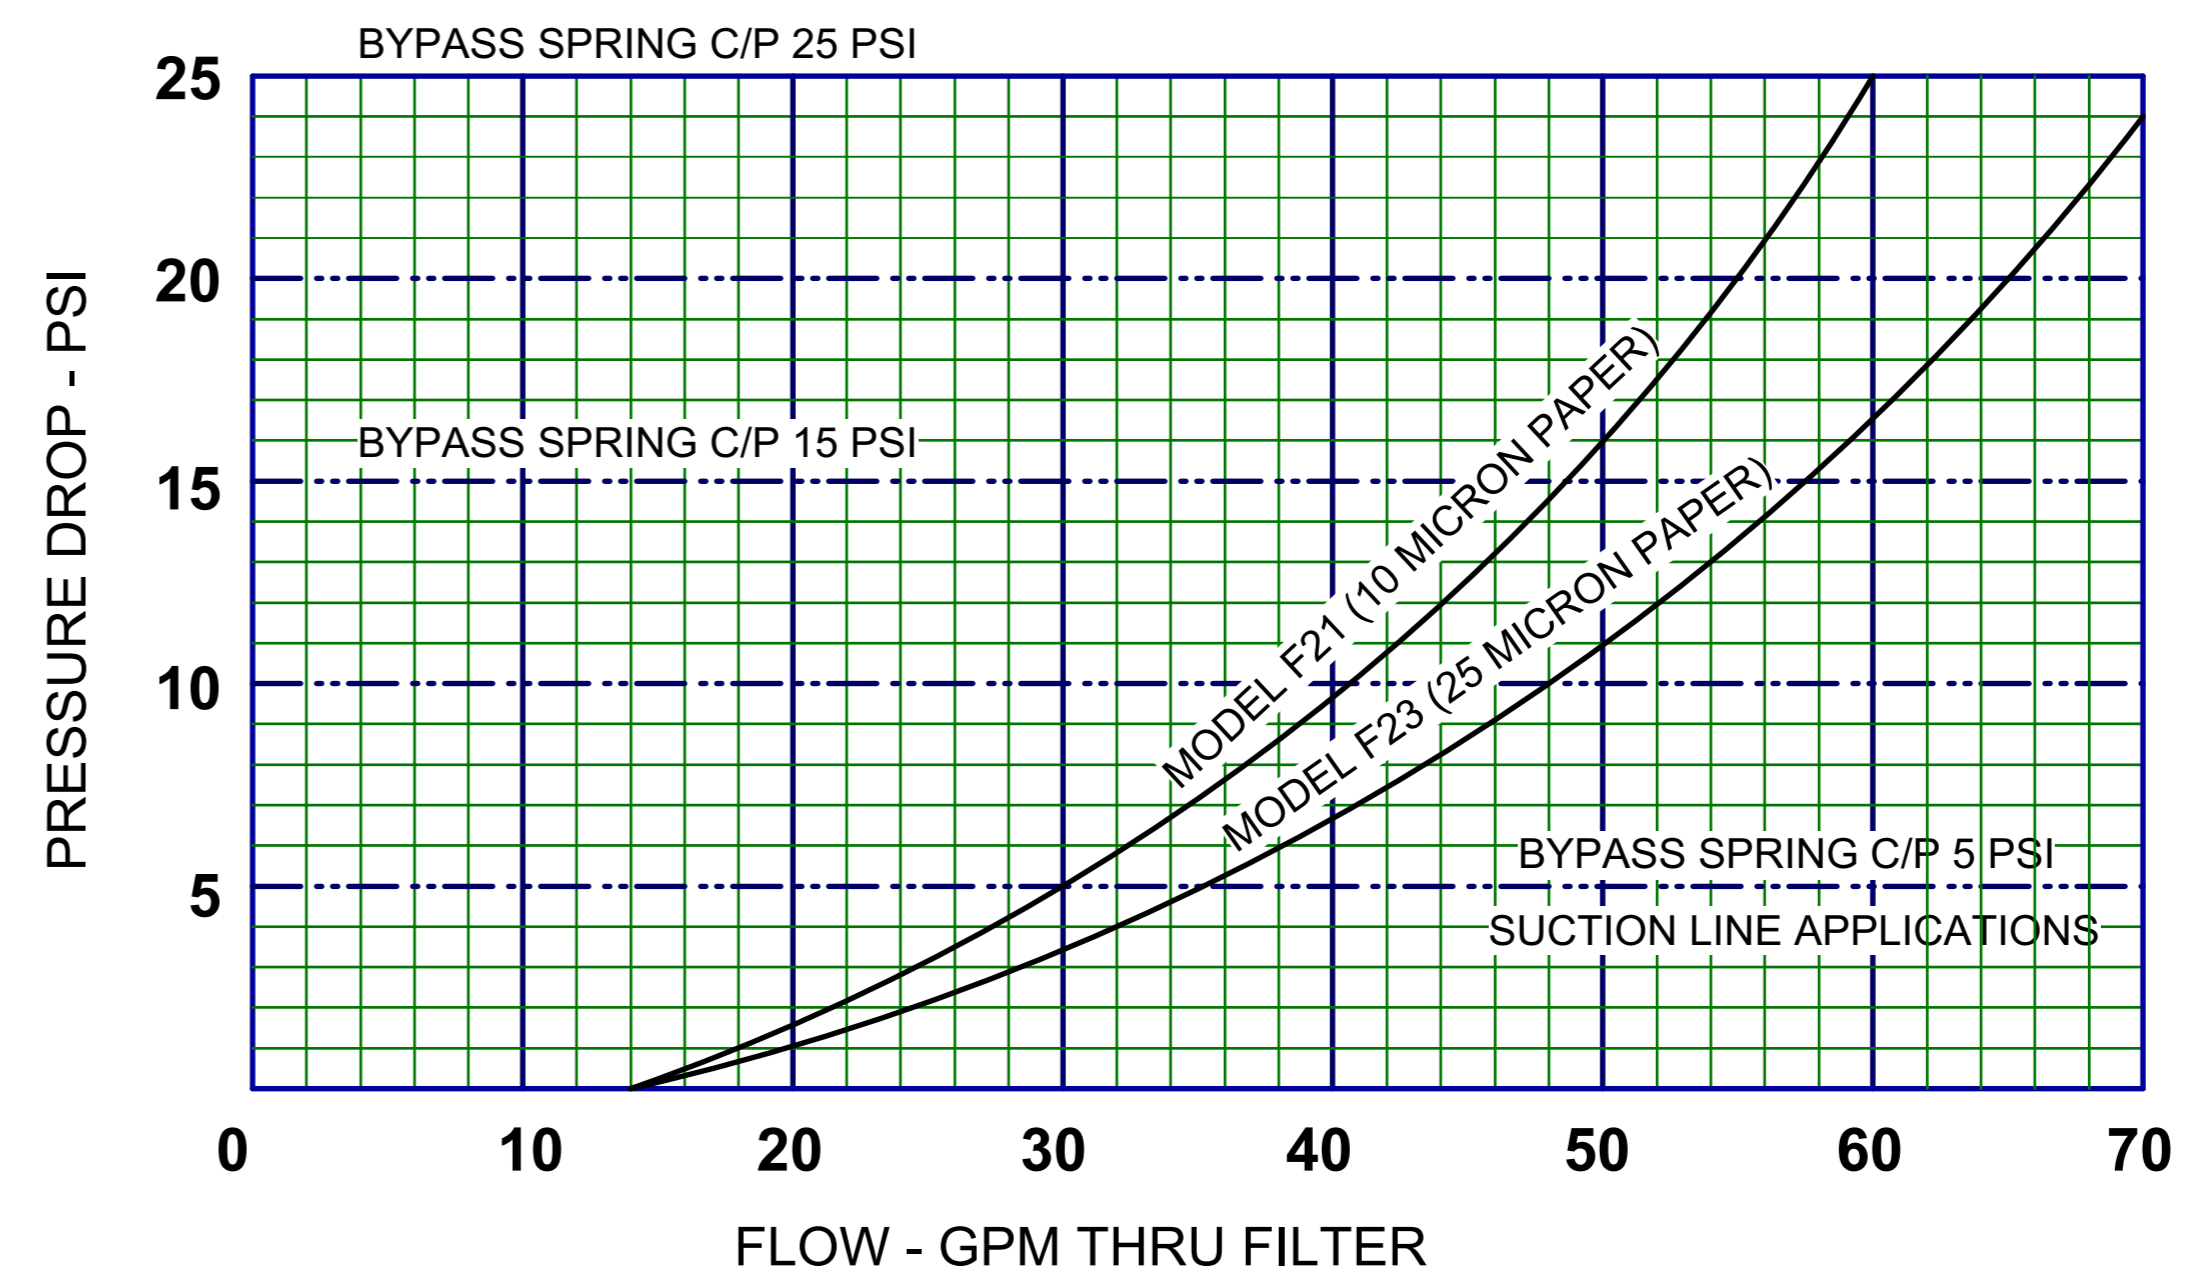

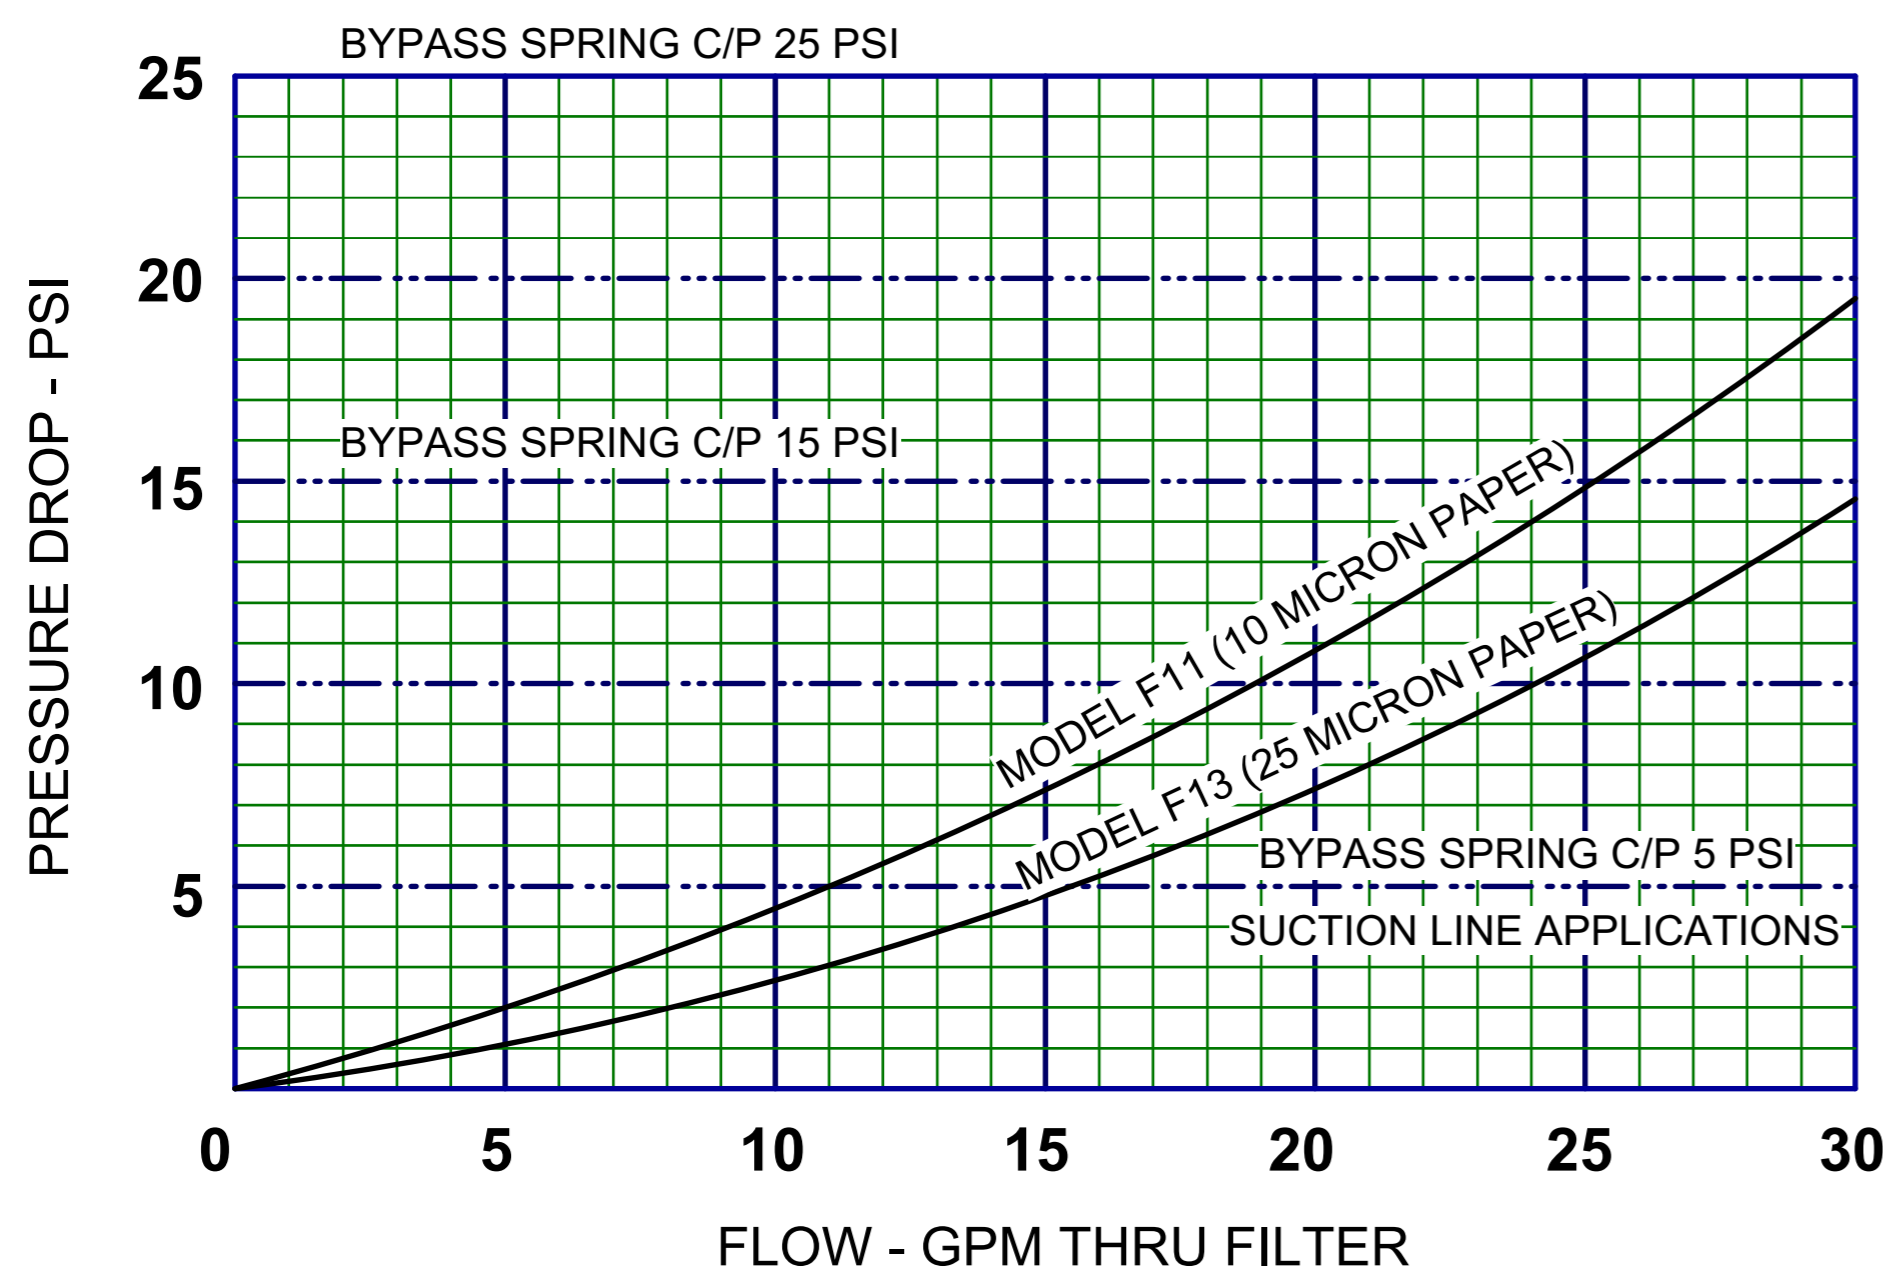

ELEMENT THREAD REFERENCE
1 1/2-12 UNF-2B

PRESSURE GAGE
1/8" NPT Thread

PERFORMANCE DATA: (Typical) Pressure Drop --- 120 SUS Oil Viscosity at 120° F

ORDERING INFORMATION:

INDICATOR (1)	MODEL NUMBER	FILTRATION	BY-PASS PRESSURE	PORT SIZE and TYPE	
				F1	F2
G	F1 (22 GPM) F2 (40 GPM)	1 10 Micron 3 25 Micron	A. 5 PSI (F1) B. 15 PSI C. 25 PSI	A. 3/4" NPTF	A. 1 1/4" NPTF

REPLACEMENT ELEMENTS:

	10 Micron	25 Micron
F1	1A9021	1A9023
F2	1A9251	1A9253

EXAMPLE: GF11BA is a model F1 filter with an indicator, 10 micron element, 15 psi by-pass spring and 3/4" NPTF ports.

(1) Omit indicator prefix if indicator is not desired. (2) By-Pass Pressure 5 PSI option only available for F1 Series.

FILTER INSTALLATION INSTRUCTIONS:

1. Tighten gage port plug in head assembly. 1/8" NPTF thread should be torqued 5 to 7 foot pounds. Use liquid pipe sealant only - NO TEFLON TAPE.
2. NOTE: Filter Element has not been tightened at the factory. Apply film of oil to seal and hand turn until element seal contacts filter head. After contact, tighten only 1/4 turn. Start system and check for leaks.
3. For best results, mount filter assembly in vertical position with filter cartridge DOWN. Allow one inch (for F1) or one and a half inch (for F2) clearance below filter for easy replacement of filter cartridge.
4. Connect filter assembly in line for oil to flow in direction of arrow on filter head.
5. Filter assembly installed as either "Return-Line" (located between control valve and reservoir) or "Suction-Line" (located between reservoir and pump inlet). 5 PSI head assembly is required for suction line applications. Springs are color coded to indicate by-pass pressures:
5 psi - yellow (F1 Only); 15 psi - red; 25 psi - green

INSTALLATION for FILTER ASSEMBLY with CONDITION INDICATOR

1A1699 Filter Gage:

1. The 1A1699 filter gage has a 0-30 psi range and fits the 1/8" NPTF gage ports on the CROSS filter heads. 0-15 psi is indicated by green area on the gage. This is the standard by-pass spring range in a return line filter. The red area from 15-30 psi indicates that the filter would be by-passing unfiltered oil. (The gage is not recommended for suction line applications.)
2. Indicator should register "0" with system not flowing. Failure to register "0" may indicate indicator is damaged or defective.

System Maintenance: Oil must be filtered to a minimum of 25 microns. Filters should be changed regularly --- spin-on types after 50 hours of initial use and then after every two hundred fifty hours of use. Use of a condition indicator is recommended.

Consult your tractor or implement owner's manual for filtration and changing recommendations for internal systems.
